

What is First Net?

The last time I wrote about First Net they were being investigated for corruption and fraud, were being sued and were using “Homeland Security” to block the courts public airing of their emails on job bidding. This was approx. 5 Years ago when we helped block the [LA RICS roll out of 150 federally funded surveillance towers](#) in the County of LA (LA RICS is the local LA sub-agency of First Net, the Federal parent agency). First Net and LA RICS are back again, to finish the job they were blocked from finishing 5 years ago, based on health effects and cancer risk according to statements from the LA County Board of Supervisors, the of hearing which I attended and personally heard the BOS state despite assurances from their Director of Public Health that the radiation from the towers was safe. The LA County Director of Public Health turned out to be wrong of course and the LA BOS right, as we now know from our own [NTP study showing clear evidence of statistically significant carcinogenic effects](#). But since when do health effects and cancer ever stop corporate interests from making a profit or Congress from giving them our tax money to do so? Thus the First Net roll out all over the county and country continue unabated. There is also no coincidence whatsoever that this is happening while 5G is being rolled out and residents were on lock down nationwide.

Now, it’s probably a silly question, but what is a “public safety agency” doing under the purview of the Dept. of Commerce?

[“FirstNet is an independent authority within the U.S. Department of Commerce.](#)

Although First Net openly talk about “first responders” use of the towers, they conveniently make no mention to city councils that the majority of use of these towers will be for private communications companies to hang their 5G antennas from to follow and track your every move, then sell that data to the highest bidder and for the military to conduct their 5G “experiments” from. A small percentage of the antennas mounted on these towers will be allocated to first responders but the majority will be for private corporate use and military use, will house 5G, IoT equipment with both commercial and military applications to create a weaponized, international, surveillance system, to be deployed according to what I read 5 years ago, amongst the [“Five Eyes” \(FVEYS\) intelligence alliance between the US, UK, Canada, Australia and New Zealand. Here is an article from 2016 on First Net Canada.](#) A cursory look did not find the First Net towers that I had read about being rolled out in Australia, but Google tends to hide things now that may seem like a “conspiracy of a global takeover agenda”.

First net was initially promoted to Congress post 9/11 as a “vital emergency system” for first responders, in order to reap approx. 7 billion in tax payers funds and counting... never let a good crisis go to waste. The stated goal of irradiation was to make sure “every single square inch of the US was covered”, according to First Net top brass. The underlying message of this ploy was “we could all die from poor emergency communications if we don’t have First Net cell towers covering every inch of the US”, which was exactly the lie our community was told when we objected to these massive radiation machines of death and destruction. But it was a clever and successful way to solicit tax payer funding for private commercial use. Hmm, where have we heard that

before? Of yes, when the [Irregulators lawsuit brought to light that fact that telecoms were bilking tax payers for billions of dollars promising hard wired infrastructure but delivering wireless.](#)

[Now the military are being more open about their intent to utilize First Net towers as their very own live, 5G, field experiment. This experiment may also include directed energy weaponry.](#) And by the way, did you know that it is completely legal for the military to experiment on the public? We can thank Congress for that as well!

First Net goes by different names depending on the area. For instance if you live in LA, the Los Angeles arm of First Net is called LA RICS - Los Angeles Regional Interoperability Communications System. A regionalized “daughter agency” is created for all areas First Net wants their towers to infiltrate.

“Electropersensitive” aka microwave radiation poisoned individuals have stated that that they are able to feel the radiation emissions from these towers from as far as 4 miles away. An EHS woman that I know of is now having to move since the tower went in 4 miles away from her previously radiation free area. Is it possible that these towers more powerful than others? Could it be the military applications or experimentation? We have to ask.

Is it possible to stop this deadly roll out of militarized 5G in our communities? Yes it is, but only if you take action. Treat them like any other tower and take the appropriate actions within the appropriate time frames and you may be able to stop them in your area. Even if they have already been installed, you may still be able to get them out depending on the situation.
