

# WISE Grid

Wireless is deleterious to health and nature.<sup>1</sup>

The Wired and Sensible (WISE) Grid consists of installing fiber-optic and copper cables *to and through* the premises of homes, schools, workplaces and buildings where they do not now exist, and utilizing those that already do exist. Fiber optics – light through glass – and copper, is fast, clear, safe and secure.<sup>2</sup> Cell phones can still be used for all applications, but for sending and receiving (calls, down-loading from the Internet, etc.), they must be plugged in. The wireless feature is retained for emergencies only. Stations, kiosks, booths, and portals in cafes and restaurants can be installed where people can plug in when out.<sup>3</sup>
