[Measles, Mumps, Rubella And Varicella Vaccine For Children Shows Nanobot Swarms, Quantum Dots And Self Assembly Hydrogel - Repost of Analysis]

[Ana Maria Mihalcea, MD, PhD]

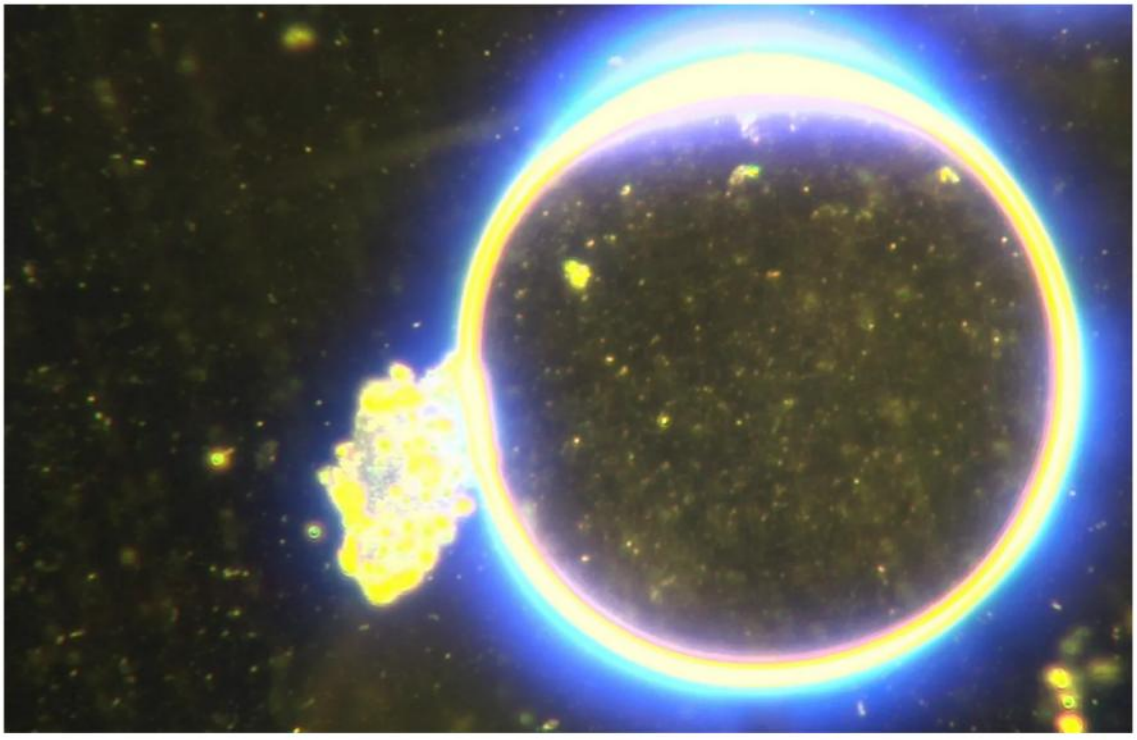

> Here the spherical structures are visible in movement. They are part of the self assembly in the above image:

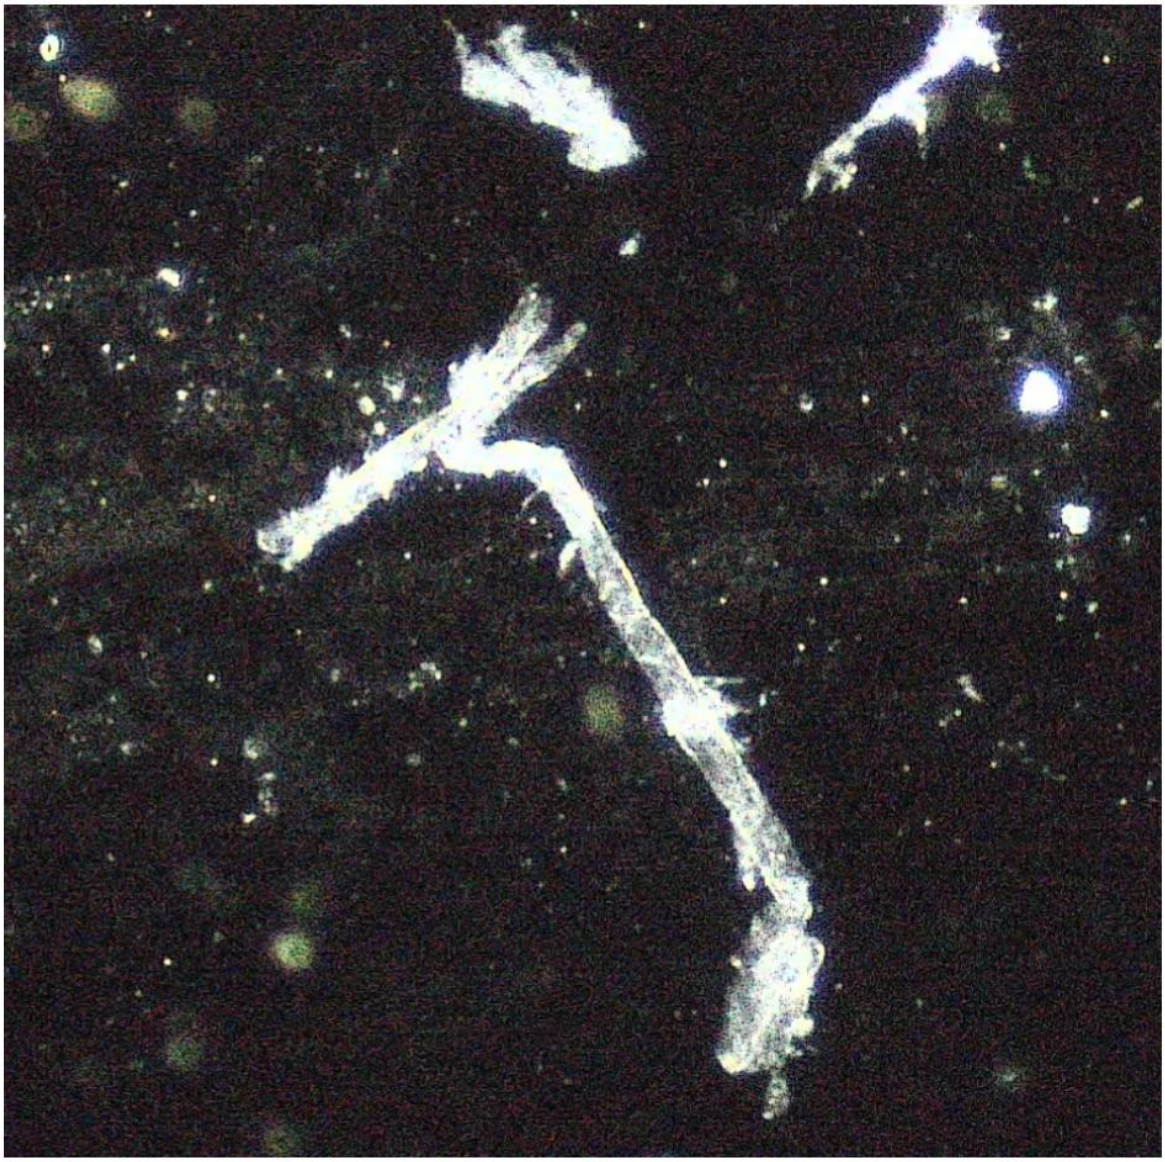

This is a coagulated hydrogel with many blinking lights visible.

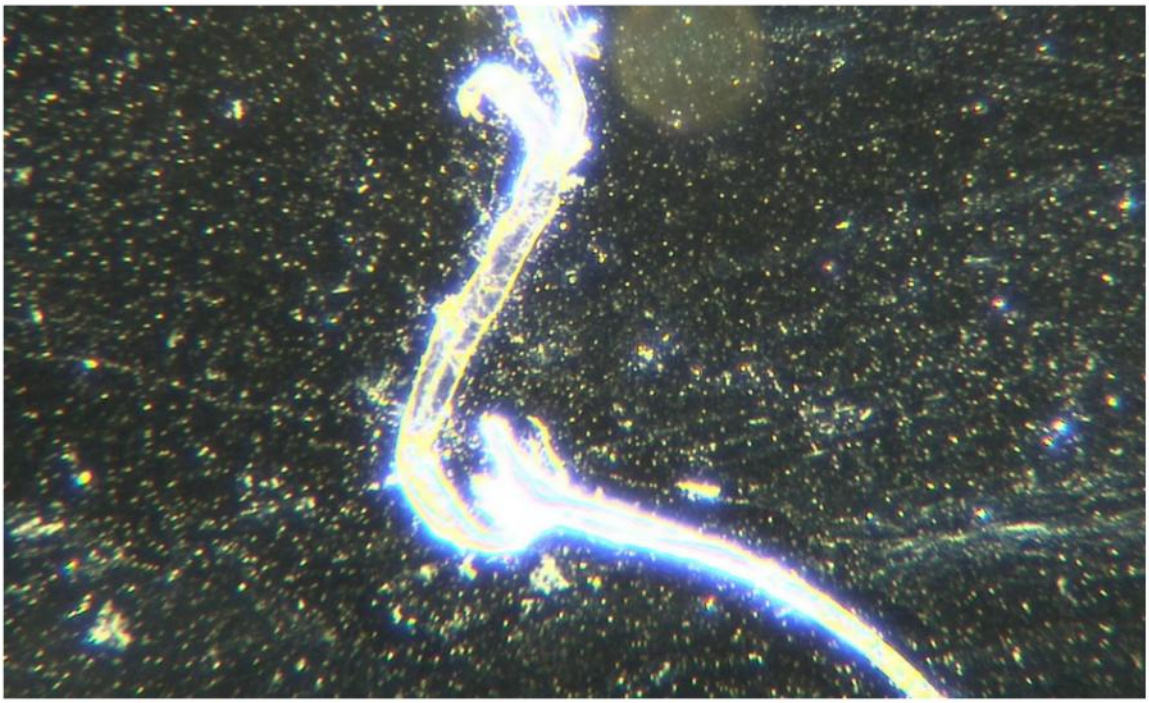

Here are the classic spheres I see in the blood growing hydrogel substance:

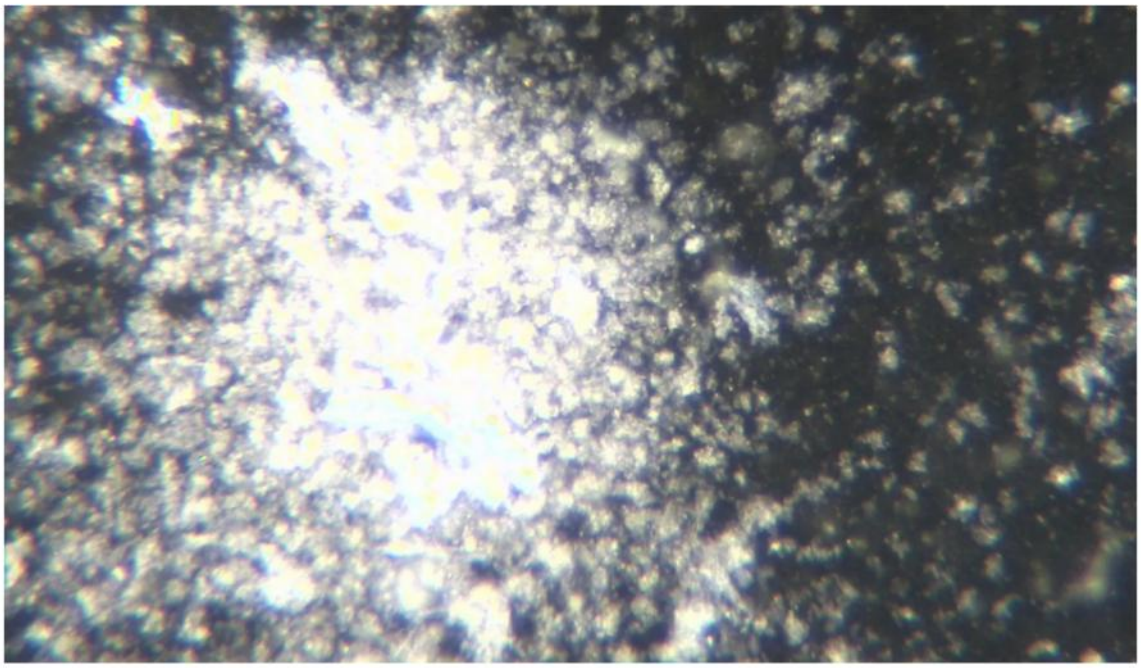

> This is 100x objective with the light dialed down showing the filaments that have grown huge:

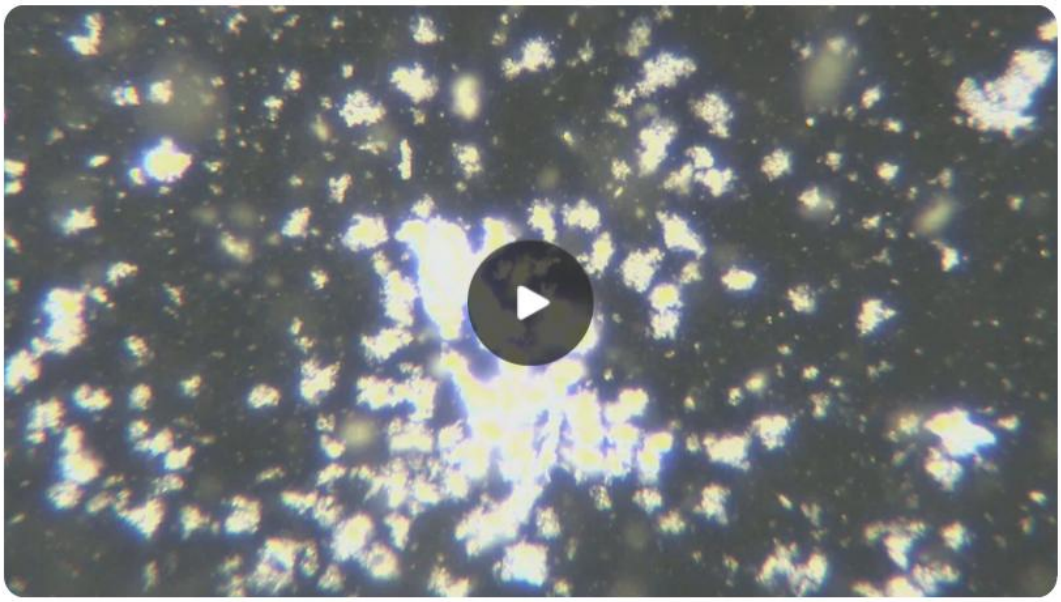

> Filaments as we know self assemble. They are not present when the material is placed on the slide in the beginning. This one appeared after about 1 hour 20 min.

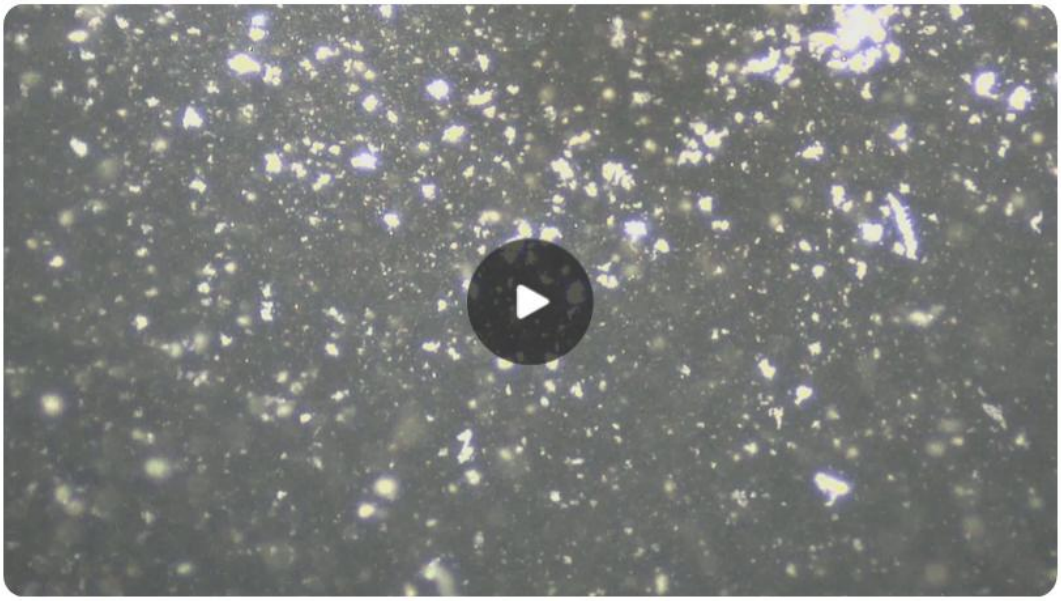

Here is what this looks like after about 70 minutes:

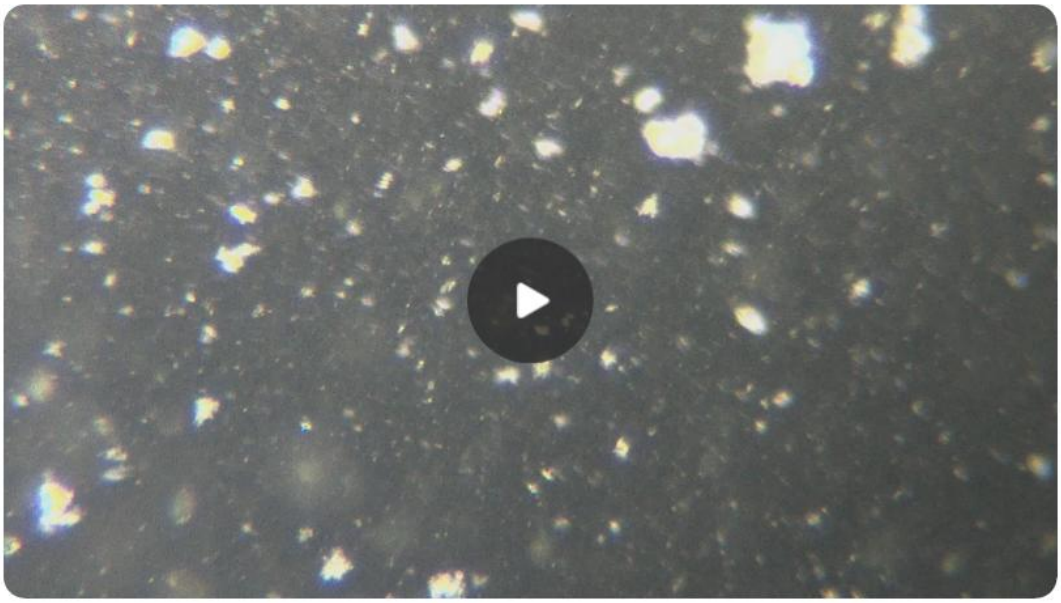

> Here you can see after about 45 minutes how much of this has already assembled and how much coordinated movement there is.

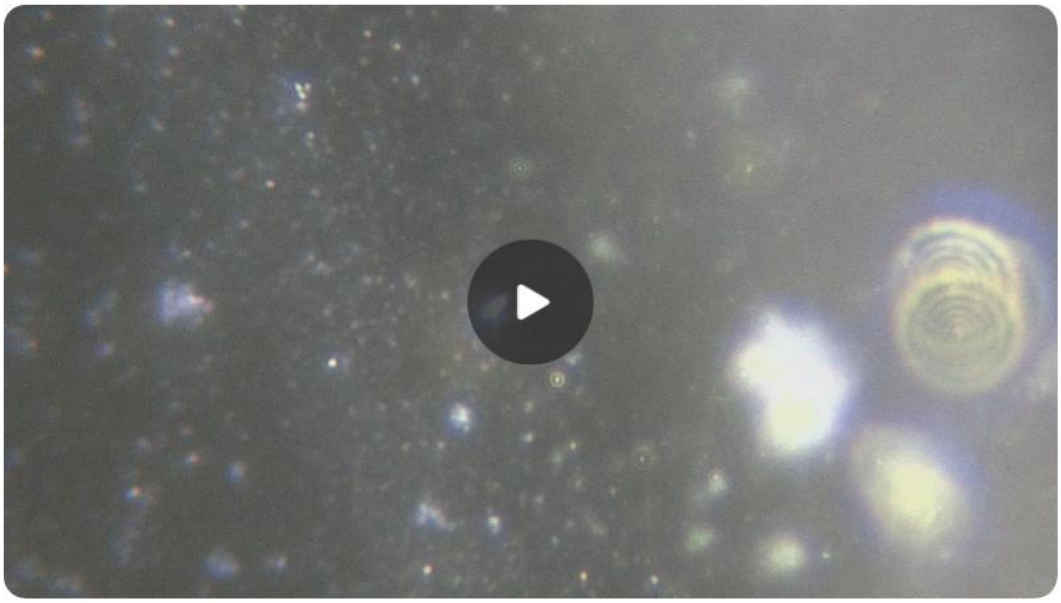

> The entire drop was moving towards the center, clearly coordinated intelligently to build a large hydrogel like clot. In this video you can see 100x magnification with clear movement. It looks just like Insulin that I filmed.

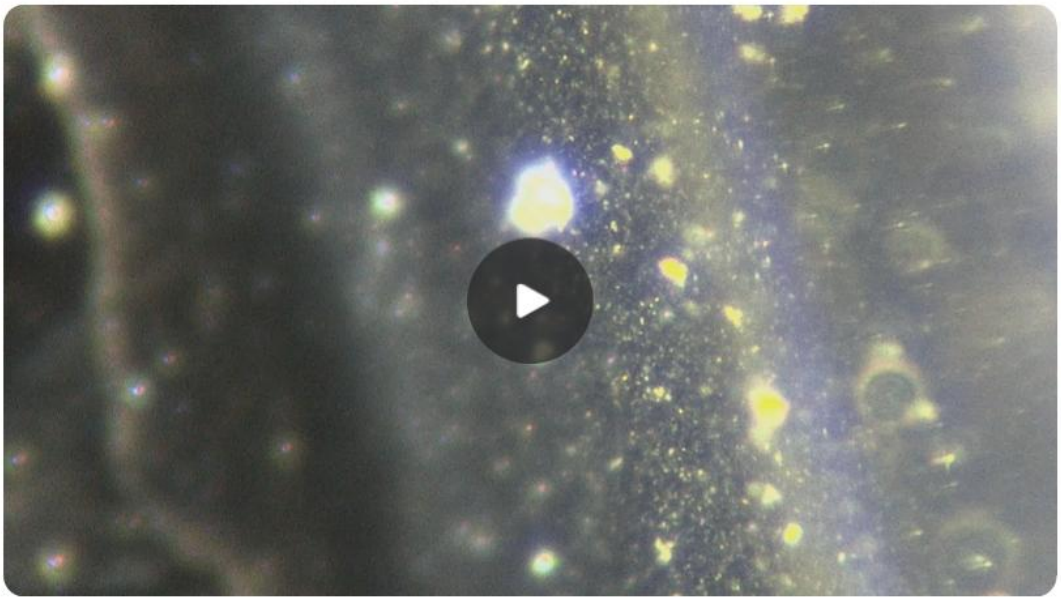

Larger pieces of hydrogel can be seen moving in the extremely busy background

> You can see that the liquid is dense and many layers of activity are seen including larger hydrogel pieces. I wanted to show the miniscule swarming in the background that is clearly involved in self assembly. A human red blood cells has about a diameter of 6.8 micrometers. I would say these small nanobots are at least 1000 times smaller than that.

> The childhood MMR vaccine is loaded with nanobots. They are so small that on my highest magnification you can barely see them, but they are clearly there. I tried to go up to 4000x with my Oil objective but could not visualize them. I took many videos and if you look at the entirety of the documentation it is clearly stunning. The MMRV vax is supposed to be stored at -56F. Thawed it looks exactly like the C19 bioweapon. Filaments do assemble and large areas of hydrogel construction. Without a cover slip the self assembly is much more visible. **This is given to 9 month old babies, then again at 15months, and then at 6 years of age.** This is the 5th childhood vaccine I looked at. It all looks the same to me, it is loaded with self assembly nanotechnology.

[Smart Phone Exposure Shows Rouleaux Formation Via Ultrasound In Large Leg Veins Within Minutes And New Guidelines For Safe Exposure For Kids To Smart Devices - Age 0-6 No Screen Time Is Safe!]

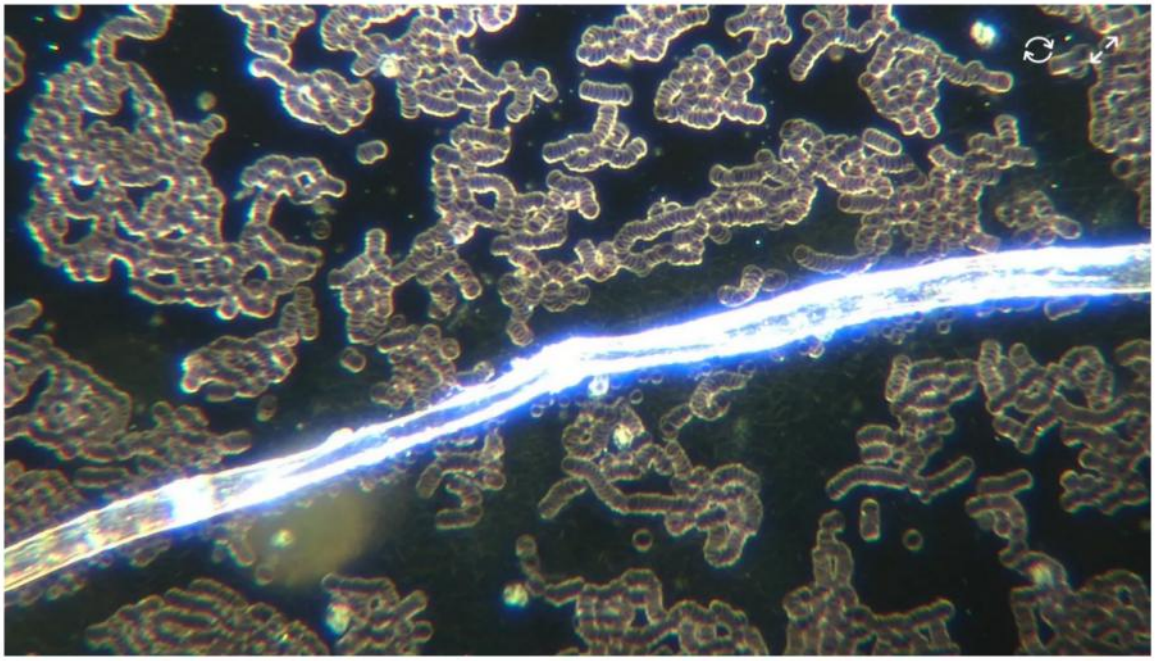

Image: COVID19 unvaccinated blood with polymer contamination after holding a cell phone. Magnification 200x. AM Medical.

https://www.frontiersin.org/journals/cardiovascular-medicine/articles/10.3389/fcvm.2025.1499499/full

Abstract

Carrying a cellphone against the body has become commonplace in our world replete with smartphones. Acute and chronic health effects caused by these devices emitting radiofrequency radiation from multiple antennas have not been well evaluated. In this study, the popliteal vein of a healthy volunteer was imaged with ultrasonography prior to and following the placement of an idle, but active smartphone against her knee for 5 min. Pre-exposure longitudinal sonographic images demonstrate a normal anechoic lumen to the popliteal vein. Images

obtained 5 min after direct skin exposure to the smartphone demonstrate a dramatic change in the acoustic appearance of the vessel. The interior of the vessel became coarsely hypoechoic with sluggish flow seen in real-time images, a typical sonographic appearance for rouleaux formation. A follow up examination performed 5 min after the subject walked around yielded continued rouleaux formation in the popliteal vein, albeit less dramatic than that observed immediately post exposure. This revolutionary *in vivo* method to assess radiofrequency radiation induced rouleaux formation should be further pursued in the general population to determine its prevalence and if its occurrence provides a unique biomarker of exposure that may predict morbidity.

(57) **ABSTRACT**

A method for forming at least a part of a preferably endovascular interventional aid with the aid of self-organizing nanorobots consisting of catoms and an associated system are provided. A form of the required interventional aid is determined from at least one 3D image data record of a target region. The determined form is converted to a readable and executable program code for the respective catoms of the nanorobots and is transferred to a storage unit. The program code is executed which prompts self-organization of the previously unstructured catoms to form the required interventional aid according to the previously determined form.

METHOD FOR FORMING AN INTERVENTIONAL AID WITH THE AD OF SELF-ORGANIZING NANOROBOTS CONSISTING OF CATOMIS AND ASSOCATED SYSTEM UNIT

US Goverment Admits That Anomalous Health Incidents Could Be Caused By Directed Energy Weapons

https://anamihalceamdphd.substack.com/p/cia-whistleblower-reveals-biden-admin

CIA Whistleblower Reveals Biden Admin Covered Up Attacks on Officers Injured by Direct Energy Weapons

I wanted to share this important article - about a former CIA Agent who became a Targeted Individual. Supposedly these attacks came from Russia. However, we know from deceased CIA whistleblower Dr. Robert Duncan that the CIA itself is involved in remote targeting and torturing people. The longstanding cover up that other countries like Russia are doing this, is even more gaslighting. This is an intelligence run domestic terrorism program that has been torturing innocent civilians, including children, with directed energy weapons. Many intelligence officers and high level scientists have become Targeted individuals. Prominent examples include NSA whistleblower William Binney and former CERN physicist Dr. Katherine Horton:

https://anamihalceamdphd.substack.com/p/a-targeted-individual-dr-katherine

A Targeted Individual: Dr. Katherine Horton -PhD in Experimental Particle Physics -Directed Energy Weapons, Nanotechnology Microchip Implants, Military Neuro/Biotechnology and Systemic Corruption

Dr. Katherine Horton is founder and lead investigator of the Joint Investigation Team US-Europe for Directed Energy Weapons, Military Neuro/Biotechnology and Systemic Corruption. Originally a High Energy Physicist who worked at the Large Hadron Collider at CERN in Geneva and at the German Electronsynchrotron DESY in Hamburg, Dr. Horton left particle physics to undertake research in Medical Physics and the Physics of Complex Human Systems where she studied economies, finance, currency systems and white collar crime. Becoming a victim of Western Intelligence she was assaulted with Directed Energy Weapons and discovered that she was implanted along with thousands of victims. She founded the Joint Investigation Team to investigate these crimes, help such victims and stop a global genocide.

Compact terahertz sensor identifies cancer types with record sensitivity and 93% accuracy

I am reposting this article that was just published today from Nanowerk about a recent study in Advanced Materials. Terahertz sensors can determine human cancer cells and specific cancer types with 93% accuracy. This shows the once again exponential advancement of bio-nanotechnology that is transforming the health care system as we speak. Note that if they know how to diagnose cancer cells by their unique electromagnetic frequency signature, they also know how to induce it by sending that very frequency in the terahertz range. Biosensors do have potential bidirectional capacity. They can emit a signal and they could also receive a signal.

The evolution of this technology will be the AI controlled intra body hospital. This allows nanotechnological devices to perform diagnostics and surgeries inside of the body. This is not

fiction, but science carefully planned as I wrote about here:

Darkfield Microscopy Of Humira Adalimumab Injection Used For Autoimmune Diseases - Liposomes Building Biosensing Nanofibers

The liposomes also attract microrobots as well as surrounding nanofibers - magnification 100x.

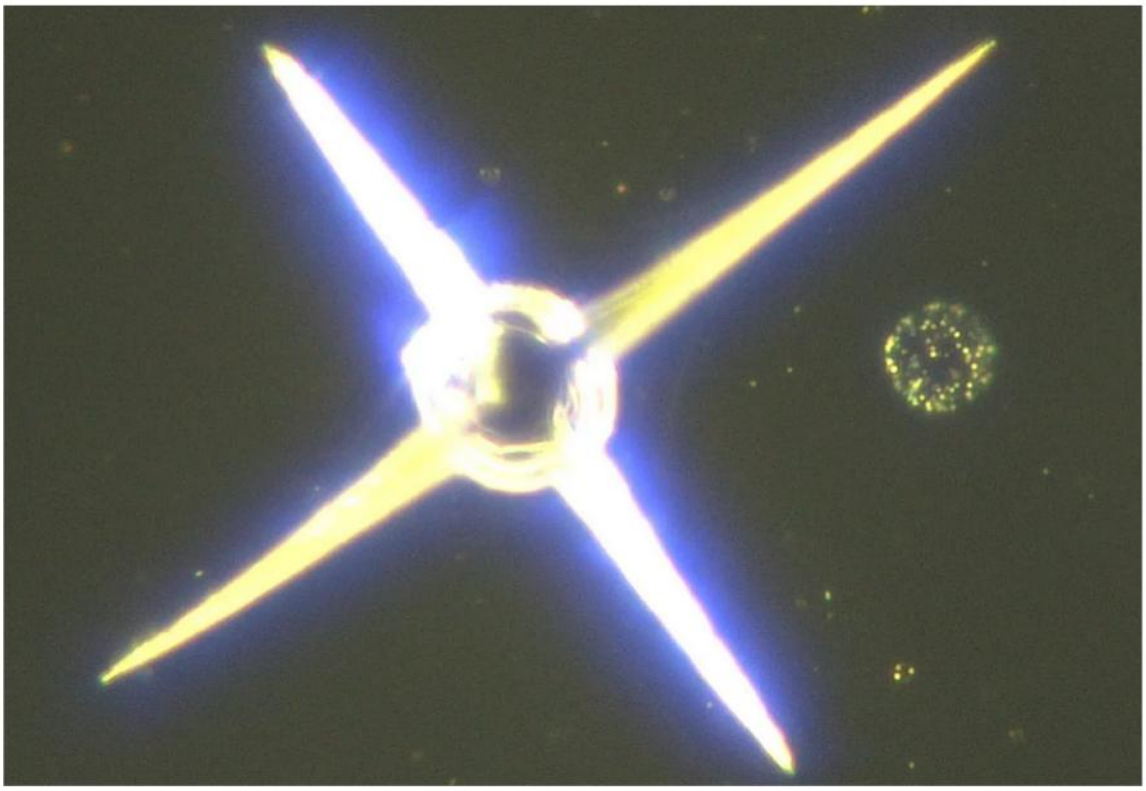

Here the elaborate nano/ microfibers are seen - magnification 2000x.

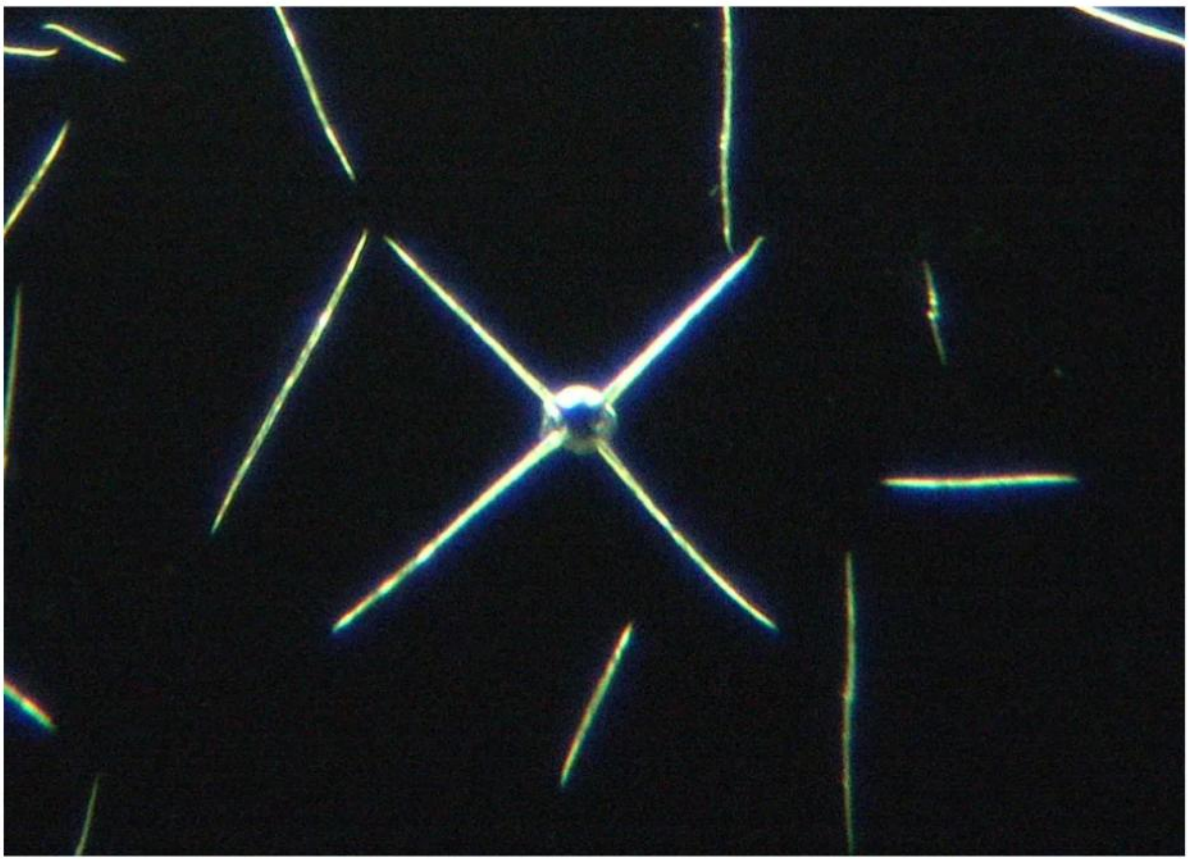

Here the liposomes and their arms connect and change luminescence to dark - magnification 200x.

Luminescence seen with adjacent microrobot - magnification 2000x.

The liposomes developed antennas - magnification 200x.
